EXPERIENCE

JPMorgan Chase & Co.

Software Engineer II

February 2026 – Present

Jersey City, NJ

- Led delivery of a real-time notification feature on the developer portal that replaced ad-hoc Teams channel alerts for platform and API gateway incidents, reducing awareness time from hours to seconds for thousands of enterprise users
- Automated integration tests in the Jenkins CI/CD pipeline for a Spring Boot microservice, replacing manual evidence uploads with test results to verify production releases, saving developers 1–2 hours of manual effort per weekly release
- Overhauled the weekly release changelog process by introducing a CLI tool to automatically compile a list of changes, eliminating manual compilation and saving release coordinators hours of manual effort per release

JPMorgan Chase & Co.

Software Engineer I

August 2023 – February 2026

Jersey City, NJ

- Implemented reusable React components for a cloud-native developer portal used to manage API Gateway access across the enterprise, improving developer onboarding, API discovery, and enabling self-service workflows for hundreds of internal teams
- Contributed new features to automate the API subscription process for internal and external developers within Chase, transforming a previously months-long manual process to an automated process completed in minutes
- Engineered a Spring Boot microservice to automate the migration of 1000+ API documentation files from a legacy platform to a new API management system, preserving data integrity and eliminating manual migration work for API owners
- Increased code coverage from 0% to 85% for an internal application used to track the migration of 1500+ Chase internal APIs across data centers, improving code reliability and enabling its first production release
- Refactored the developer portal to integrate with a policy-based IAM system, replacing role-based authentication to tighten application security and enable fine-grained user access controls

JPMorgan Chase & Co.

Software Engineer Intern

June 2022 – December 2022

Jersey City, NJ

- Led the integration of a new incident analysis feature using React and Redux, improving root cause tracing for 100+ Asset & Wealth Management applications and reducing downtime through faster incident resolution
- Deployed AWS Lambda functions with Terraform to clean inactive cloud resources, contributing to an initiative that saved \$40,000 per month in cloud costs

SKILLS

Languages: Typescript, JavaScript, Java, Python, HTML, CSS, Bash, Terraform, SQL, GraphQL

Frameworks and Libraries: Spring Boot, React, Next.js, Redux, Vue, Nuxt.js, Express.js, Node.js, Storybook

Databases: DynamoDB, MongoDB, PostgreSQL

Cloud and DevOps: Docker, Kubernetes, Splunk, Git, AWS (EC2, EKS, Lambda), Grafana, Jenkins, Linux

Testing: Jest, Cypress, Cucumber, JUnit, React Testing Library

Methodologies: Agile, CI/CD, REST API, Microservices

PROJECTS

Self-Hosted Home Media Server

Personal Project

June 2022 - Present

- Architected a self-hosted home media server serving 10+ active users, containerizing services with Docker to enable isolated, reproducible, and easily maintainable deployments
- Built Grafana dashboards to monitor system uptime, resource utilization, and service health to proactively detect and resolve reliability issues

EDUCATION

Stevens Institute of Technology

Bachelor of Science, Computer Science

August 2019 – May 2023

GPA: 3.83/4.00
